Lab 1: Report

Network Performance

The website generated 64 network requests, with 313 KB of data transferred and about 2.8 MB of total resources. The page reached DOMContentLoaded in 7.10 seconds and completed loading in 8.39 seconds, with some activity continuing until 13.46 seconds. Overall, the network performance was acceptable, although the loading time was relatively slow.

Overall Performance

The screenshot displays a web browser window with the Wikipedia page for Real Madrid CF. The page includes the Wikipedia logo, a search bar, and a navigation menu. The main content area shows the title "Real Madrid CF" and a brief description: "From Wikipedia, the free encyclopedia". Below this, there is a paragraph of text and a large image of the Real Madrid club crest. The browser's address bar shows the URL "en.wikipedia.org/wiki/Real_Madrid_CF".

Overlaid on the right side of the browser window is the Chrome DevTools Performance tab. The "Local metrics" section shows the following data:

- Largest Contentful Paint (LCP):** 1.93 s. Your local LCP value of 1.93 s is good. (Good: ≤2.50 s, Needs improvement: 2.50 s-4.00 s, Poor: >4.00 s)
- Cumulative Layout Shift (CLS):** 0.11. Your local CLS value of 0.11 is good. (Good: ≤0.10, Needs improvement: 0.10-0.20, Poor: >0.20)
- Interaction to Next Paint (INP):** -

The "Next steps" section on the right provides additional information and controls:

- Field metrics:** See how your local metrics compare to real user data in the [Chrome UX Report](#). (Set up)
- Environment settings:** Use the [device toolbar](#) and configure throttling to simulate real user environments and identify more performance issues. (CPU: No throttling, Network: No throttling, Disable network cache)
- Record:** (Ctrl + E)
- Record and reload:** (Ctrl + Shift + E)

The Performance tab showed an LCP of 1.93 seconds, which is considered good, meaning the main content appeared quickly. The CLS was 0.11, which is excellent and indicates that the page remained visually stable while loading. Overall, the website demonstrated good performance and a stable user experience, despite the relatively slow overall network loading time.
